# 1. Introduction

## 1.1 What is Scrumify?

Scrumify is an agile sprint management platform that helps your team plan, track, and improve its work using Scrum methodology. It provides a shared workspace where you can see sprint progress, monitor story completion, and track team performance over time.

### Sprint Board

Visual Kanban board showing all user stories and their current status in the active sprint.

### Team Dashboard

Key metrics and charts summarizing team velocity, completion rates, and category distribution.

### Sprint History

Browse all past and current sprints, with detailed progress and completion data for each.

### AI Insights

AI-powered retrospective analysis based on recent sprint data to help identify improvements.

## 1.2 Your Role as a User

As a regular user, you have **read-only access** to your team's workspace. This means you can view all information, charts, and sprint boards — but creating, editing, or deleting content is handled by your Scrum Master or Admin.

| You Can | Admin Only |
|---|---|
| View the active sprint board | Add, edit, or delete stories |
| Browse all sprints and their details | Create or manage sprints |
| View team metrics and velocity charts | Move stories between statuses |
| Run AI retrospective analysis | Manage developers and settings |
| View team roster and capacity | Add or remove team members |

> **Questions about your team's content?** Contact your Scrum Master or Admin if you need stories added, sprint dates changed, or other modifications made to your workspace.

# 2. Accessing Scrumify

## 2.1 Using Your Access Link

You do not need a password to access Scrumify. Your Admin will provide you with a unique **access link** — a URL that logs you in automatically and takes you directly to your team workspace.

1. Receive your access link from your Scrum Master or Admin (usually shared by email or messaging).
2. Click the link or paste it into your browser's address bar.
3. You are automatically logged in and redirected to your team's Dashboard.

**Tip:** Bookmark your team dashboard URL after your first login so you can return directly next time without needing the access link.

**Note:** Your access link is unique to you. Do not share it with others, as it grants access to your team's workspace under your name. If you think your link has been compromised, ask your Admin to generate a new one.

## 2.2 Navigating the Interface

After logging in, you will see the Scrumify navigation bar at the top of every page.

| Element | Description |
|---|---|
| **Scrumify logo** | Click to return to your team Dashboard |
| **Logout button** | Signs you out and clears your session |

### Team Workspace Tabs

Your team workspace has one tab visible to you: **Dashboard**. From the Dashboard, you can navigate to all sections of your team's workspace including Sprints and Velocity.

**Note:** Some tabs (Team, Settings) are visible only to Administrators. Your view may

differ from what your Admin sees.

# 3. Team Dashboard

The Team Dashboard is the first page you see after logging in. It provides a complete overview of your team's current and historical performance.

## 3.1 Overview Metrics

Five metric cards at the top of the dashboard summarize your team's performance:

| Metric | What It Means |
|---|---|
| **Total Sprints** | Total number of sprints your team has run |
| **Average Velocity** | Average story points delivered per completed sprint |
| **Avg Dev Time** | Average time a story spends being developed (In Progress status) |
| **Avg Test Time** | Average time a story spends in testing (Dev Done status) |
| **Avg Completion Rate** | On average, what percentage of planned capacity your team delivers |

## 3.2 Velocity & Category Charts

Two charts help you visualize your team's performance over time:

### Velocity Chart

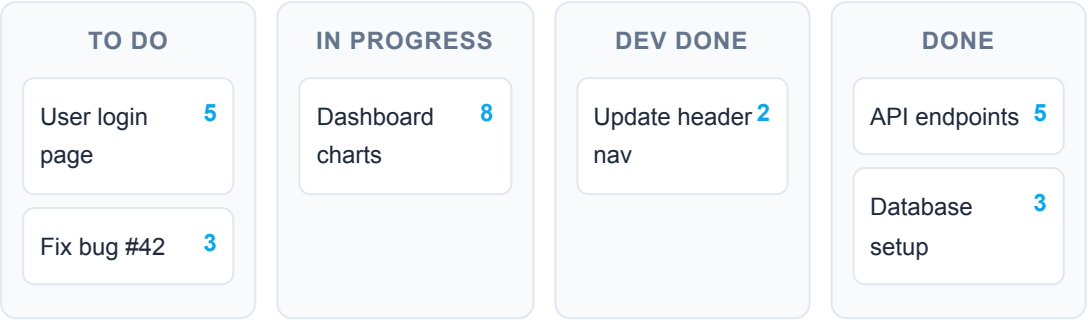
A bar and line chart comparing **SP Planned** (what was planned) vs. **SP Done** (what was delivered) for each sprint. A dashed line shows your average velocity. Use the sprint toggle buttons above the chart to show or hide specific sprints.

### Category Donut Chart

A pie chart showing how your team's story points are distributed across work types: User Story, Bug, MCO (operational tasks), Best-effort, and Tech Lead. This helps understand your team's workload balance.

## 3.3 Active Sprint Board

If your team has an active sprint running, a Kanban board is displayed showing all stories organized by their current status.



## Story Card Information

Each story card shows:

- **Story ID** — a short identifier (first 8 characters)
- **Story title** — description of the work item
- **Story points** — estimated complexity/effort
- **Assignee** — the developer assigned to the story (if any)
- **Category badge** — type of work (User Story, Bug, MCO, etc.)

> **Tip:** If a story's point value appears in red, it means the estimate was changed at some point. Hover over the number to see the full history of point changes.

## 3.4 Upcoming & Completed Sprints

Below the active sprint board, the dashboard shows sprint cards in two sections:

### Upcoming Sprints

Planned sprints that have not yet started. Each card shows:

- Sprint name and date range
- `Planned` status badge
- Story points currently planned

### Completed Sprints

Finished sprints. Each card shows:

- Sprint name and date range
- Story points delivered out of capacity
- Progress bar showing completion percentage

Click any sprint card to open its full details page.

# 4. Sprints

## 4.1 Viewing All Sprints

Navigate to the **Sprint** section from the Dashboard's sprint cards or by navigating to your team's sprint list. This page shows all sprints organized by status.

### Active & Planned Sprints

Current and upcoming sprints are shown at the top. Each card displays sprint name, dates, capacity, story point progress, and time elapsed.

### Completed Sprints

Past sprints are grouped in a collapsible section at the bottom. Click the **Sprints Completed (N)** label to expand and see them.

### Sprint Status Badges

- **Active** — sprint is currently in progress
- **Planned** — sprint is scheduled but not yet started
- **Completed** — sprint has ended

## 4.2 Sprint Board Details

Click any sprint card to open its detailed board view.

### Sprint Statistics

Five cards at the top of the sprint board show real-time statistics:

| Statistic | What It Shows |
|---|---|
| **SP Capacity** | Total story points the team can deliver in this sprint |
| **SP Planned** | Story points the team aimed to deliver |
| **SP Current** | Total story points across all stories in the sprint |
| **SP Done** | Story points of completed stories |
| **Completion %** | Percentage of capacity delivered |

## Progress Bars

Two progress bars provide a visual summary:

- **Story Points progress** — SP Done vs. SP Capacity. Green ≥80%, amber 50–79%, red <50%.
- **Time Elapsed** — working days used vs. remaining. Red if >80% of time is used (urgency indicator), amber if 50–79%, green if <50%.

> **Tip:** The progress bars use *working days* (Monday–Friday), not calendar days. Weekends are not counted.

## Category Breakdown

A table shows how stories are distributed across categories for this sprint, including SP done vs. total per category with color-coded completion percentages.

## Transition Times

Two time metrics appear below the category breakdown:

- **Avg In Progress → Dev Done** — average time your team spends developing stories
- **Avg Testing → Done** — average time your team spends testing stories

These metrics help identify bottlenecks in the development process.

## The Kanban Board

The full Kanban board shows all sprint stories organized into four columns:

| Column | What It Means |
|---|---|
| ○ To Do | Work that hasn't been started yet |
| ⏱ In Progress | A developer is actively working on this |
| ⚗ Dev Done / Testing | Development complete, awaiting testing or review |
| ✓ Done | Fully completed and accepted |

## Reading Story Cards

In the detailed sprint board, story cards contain additional information compared to the dashboard view:

- **Story ID** — unique short identifier
- **Title** — story description
- **Category badge** — type of work with custom color
- **Story points** — shown in red if ever modified (hover for history)
- **Assignee** — developer assigned to the story
- **Dev time badge** — shows time spent in development (visible once the story has moved past In Progress)
- **Test time badge** — shows time spent in testing (visible once the story has moved past Dev Done)

> **Note:** On the detailed sprint board, you will not see edit or move buttons — those are available to Admins only. Your view is read-only, showing all the same story information without modification controls.

# 5. Velocity

The Velocity page provides in-depth analytics about your team's historical performance. Access it by navigating to your team and clicking the **Velocity** link from the Sprint section.

## 5.1 Velocity Chart

The velocity chart shows your team's performance over completed sprints:

- **Blue bars** — story points planned for each sprint
- **Green bars** — story points actually delivered
- **Blue line** — velocity per developer-day (efficiency metric)
- **Dashed line** — your team's average velocity across all sprints

Use the **sprint toggle buttons** above the chart to filter which sprints are included in the view. This is useful for excluding outlier sprints or focusing on recent performance.

### Category Distribution Chart

A donut chart below the velocity chart shows the percentage breakdown of story types across all selected sprints. This helps you understand whether your team is spending more time on new features, bugs, operational work, or other categories.

## 5.2 AI Retrospective Advisor

Scrumify includes an AI-powered retrospective tool that analyzes your team's recent sprint data and provides actionable recommendations.

1. On the Velocity page, find the **AI Retrospective Advisor** section (marked with a "Powered by Claude" badge).
2. Click **Analyse** to start the analysis. This may take a few seconds.
3. The AI will generate a formatted analysis with insights about your team's performance trends and recommendations.
4. Click **Regenerate** to run a fresh analysis at any time.

> **Tip:** The AI advisor analyzes the last 3 completed sprints. For the most useful insights, ensure your team has at least 2–3 completed sprints with accurate story point data.

## Sprint Performance Table

At the bottom of the Velocity page, a table lists all sprints with:

- **Sprint name** and **date range**
- **Capacity** — team story point capacity for that sprint
- **Planned** — story points targeted
- **Delivered** — actual story points completed
- **Efficiency** — delivered ÷ capacity (color-coded: green ≥80%, amber 50–79%, red <50%)

# 6. Team Members

The Team tab shows your team's composition, capacity, and availability. As a user, this is a read-only view.

## 6.1 Team Statistics

Three metric cards at the top of the Team page provide capacity information:

| Metric | Description |
|---|---|
| **Days worked this sprint** | Total working days × number of developers since the current sprint started |
| **Total days worked** | Total working days × number of developers since the team's first sprint |
| **Theoretical capacity** | Sum of all developer story point capacities per sprint |

## 6.2 Days Off Calendar

The calendar shows planned days off for all developers in the team. Each row represents one developer, and each column represents a day of the month.

- ½ in a cell — the developer has a half-day off that day
- ✕ in a cell — the developer has a full day off that day
- **Empty** — the developer is working that day
- **Gray columns** — weekends (Saturday and Sunday)

Use the **Previous / Next** navigation arrows to browse different months.

> **Note:** As a regular user, you can view the calendar but cannot add or remove days off. Contact your Admin to update day off records.

## 6.3 Developer Roster

Below the calendar, the developer list shows each team member with:

- **Name** with avatar initial
- **Role** — Developer or Tech Lead

- **Story point capacity** — how many SP they can deliver per full sprint

> **Tip:** The sum of all developers' story point capacities equals the team's *Theoretical Capacity* shown in the cards above. This is the maximum SP the team could deliver in a full, uninterrupted sprint.

## 6.4 Logging Out

To log out of Scrumify, click the **Logout** button in the top navigation bar. Your session will be cleared and you will be redirected to the login page.

To access Scrumify again, use your access link provided by your Admin. If you have bookmarked your team dashboard, you may need to use the access link again after logging out.

> **Need help?** If you experience any issues accessing your workspace, cannot find your access link, or have questions about your team's sprint data, please contact your Scrum Master or Scrumify Administrator.
